

# MEDICAL MICROBIOLOGY

**Prerequisite: Biology; Chemistry; Anatomy and Physiology**

This course is a semester course that is a laboratory based class. Students will spend 60% of classroom time in the laboratory studying, growing, analyzing, and identifying microorganisms. Students will learn laboratory skills that are different from any other science course that they might have taken in the past. This is considered a higher level science and requires a good background in anatomy and physiology, along with a general knowledge of medical terminology.
